Maximum reliability and comfort
for all types of buildings

MpGO!evolution

This is a lift that combines **gearless technology** with **state-of-the-art electronics**. It is designed to offer an optimal level of service and connectivity, minimising waiting times and **ensuring maximum comfort for passengers**. It is also highly customisable and includes a range of features made possible by MP's IoL (Internet of Lifts) connectivity ecosystem.

Excels in
Innovation, comfort
and eco-efficiency

Capacity
4-21 people
(320-1600 kg)

No. stops
32 (maximum)

Voltage:
Three-phase: 380 / 400 / 415 V

Type of lift
Gearless without
machine room

Speed
1.0 - 1.6 - 2.5 m/s

Type of traffic
Very intense

Three-phase (optional):
220 / 360 / 440 V

Single-phase (optional): 230 V

Recommended uses

Passenger lift

Bed lift

Goods lift

Energy efficiency
and minimal impact
on the environment

Innovative

adaptable

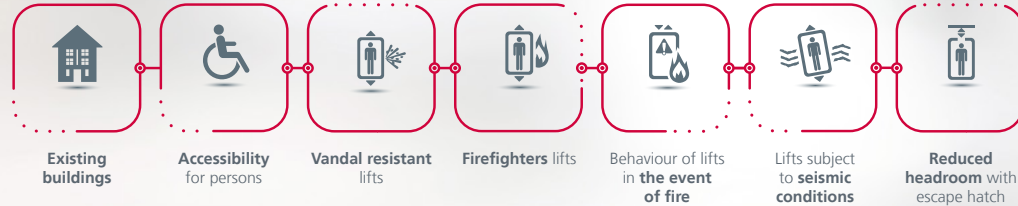

Robust and energy-efficient, making it ideal for new buildings

If your project requires a **robust and adaptable** design, then **MpGO!evolution** is your best option. Especially recommended for new, highly transited buildings, such as shopping centres and train stations, its high level of **energy efficiency** also makes it a great option for residential buildings.

Adapts to all kinds of shafts and maximises performance

The fact that it can be adapted to all kinds of shafts and customer requirements means it offers an optimal solution for any project.

Your lift on your smartphone thanks to cutting-edge technology

MP IoL (Internet of Lifts) is MP's very own lift connectivity ecosystem, which, by using the latest technology, has made possible a new generation of connected lifts that offer new services and features, designed to **improve the experience of users, owners and technicians.**

This means new features and benefits involving greater control, safety and efficiency.

Safety in Real Time

The fact that the lift is connected to a service centre means **its status can be monitored automatically in real time.**

Your lift on your smartphone

Being able to connect to the lift using a mobile phone means passengers are able to interact with the multimedia screen, call the lift from their phone and get copies of invoices, reports and quotes in real time.

Big Data

The collection and analysis of data from the lift means waiting times can be optimised, **availability increased and the useful life of the lift extended.**

Remote Connection

Constant communication from any device means the **efficiency of maintenance operations** can be improved.

Machine Learning

The detection of patterns of usage and behaviour based on this data allows settings to be optimised and therefore **energy consumption reduced.**

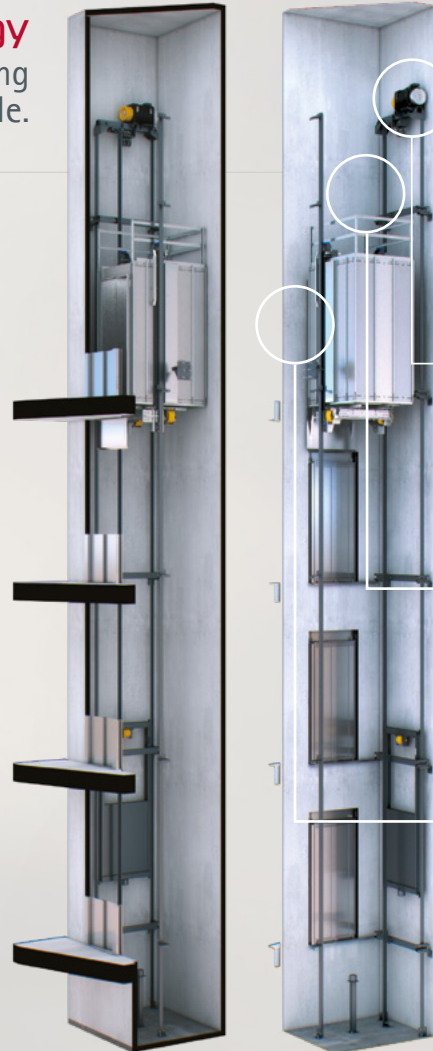

DISPLAYS

connected

Smart Energy

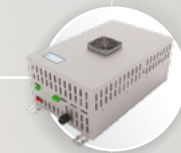

Protecting the planet and keeping energy consumption low is now possible.

This is shown by the fact that it has achieved **energy efficiency class A** in accordance with *VDI 4707*, and has up to **95% recyclability and recoverability** according to our life cycle assessment (LCA).

Gearless motor
boasting high performance and low energy consumption.

Energy recovery system
involving regenerative braking, which is able to store energy for subsequent use. Optional on lifts with intense traffic and those covering long distances.

Energy-efficient controller with remote connection
with stand-by mode and smart lighting (LED) in the car.

Maximum safety for peace of mind

YOU'LL NEVER GET TRAPPED

The **MP ecoGO** controller meets all the safety requirements laid out in the European standard EN 81-20/50, and also includes additional features designed to keep **users completely safe**.

As such, it has various rescue systems, including an automatic rescue system which **takes the lift to the nearest floor and opens its doors in the event of an interruption of its power supply**.

More comfort and less waiting

The lift also includes various control features which mean a **smoother journey** for users and a **reduction in waiting times** of up to 8 seconds.

It also boasts **maximum stopping accuracy** thanks to a positioning system with millimetric precision, and a night-time mode that allows **sounds to be programmed and turned off at night**.

State-of-the-art technology
and infinite options in terms of
aesthetics

MP CAR evolution

The car is a very important part of a lift. That is why at **MP Ascensores**, we offer a range of cars which meet even the most demanding requirements.

You can now make the most of the vast range of options on offer and **design your car yourself**, making sure it's a perfect fit for your building, requirements and personal preferences.

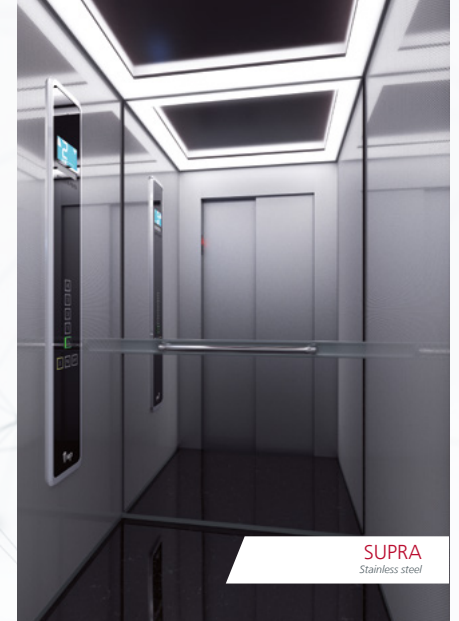

All you have to do is select a car range and then let your imagination do the rest. **You can choose from a wide range of finishes, mixing and matching them as you wish.**
